FEDERAL

BARE GEL

HST 30 SUPER CARRY

Shooting's biggest cartridge introduction in decades is getting off to a powerful start with Federal Premium® HST®. Federal's all-new 30 Super Carry bridges the largest performance gap in handgun self-defense. Its .312-inch diameter projectile carries as much muzzle energy as 9mm Luger, with terminal performance that far exceeds that of 380 Auto. The proven HST bullet design gets even more from the cartridge, driving even deeper penetration and larger expansion. The physical dimensions of the 30 Super Carry cartridge allow more magazine capacity than 9mm Luger.

AMERICAN EAGLE 30 SUPER CARRY

Train hard with the most significant cartridge release in generations. American Eagle®, loaded in Federal® Ammunition's 30 Super Carry cartridge, provides an extremely similar feel and point of impact as its HST counterpart for extremely effective training. The cartridge itself provides the power of the 9mm Luger with comparable felt recoil. The .312-inch diameter projectile carries the same energy as 9mm Luger with better ballistics than 380 Auto and more magazine capacity than 9mm Luger.

FORCE X2 SHORTY 12 GAUGE

Federal has combined the power of two of our newest technologies to create a shotshell option that changes the nature of self-defense. Force X2™ Shorty™ shells measure just 1 3/4 inches but hold a payload of six 00 segmenting buckshot engineered to split into two equal pieces on impact. When used with firearms designed to cycle sub-length shotshells like the Mossberg 590S, the loads offer much higher magazine capacities with up to twice the wound channels over standard buckshot loads.

BARE GEL

BARE GEL

HST 357 MAGNUM AND 327 FEDERAL MAGNUM

Fuel your magnum revolver with the power of Federal Premium HST thanks to new offerings in 357 Magnum and 327 Magnum. The proven bullet design fully utilizes the magnum performance of these cartridges to maximize expansion and hit critical penetration depths. The specially designed hollow point won't plug while passing through a variety of barriers, and the bullet jacket and core hold together to provide nearly 100 percent weight retention through even the toughest materials.

TROPHY COPPER 6.5 PRC

MEATEATER

The 6.5 PRC cartridge has earned the respect of elite long-range shooters. We've combined that performance with our Trophy® Copper bullet design to offer hunters an even more effective option. The new 120-grain load provides pinpoint accuracy and aggressive expansion, yet produces limited, manageable recoil. The copper, polymer-tipped bullet retains up to 99 percent of its weight on impact for deep penetration on a wide range of medium game.

GOLD MEDAL BERGER 6MM CREEDMOOR AND 6.5 PRC

Federal® has expanded the trusted Gold Medal® rifle ammunition line with new 109-grain 6mm Creedmoor and 140-grain 6.5 PRC loads. These fast, flat-shooting cartridges have proven themselves in competition and are loaded with Gold Medal match primers, Federal brass and specially formulated propellant.

HIGH OVER ALL 12 GAUGE

Engineered for the most elite trap, skeet and sporting clays shooters, Federal Premium® High Over All™ leaves a trail of shattered targets in its wake and more reloads per shell. Its hard, high-antimony lead payload and exclusive one-piece Podium™ wad produce the most consistent patterns, while the solid brass head and tapered, one-piece hull make reloading easier than ever. It's the ultimate competition load for the world's best shooters.

HAMMERDOWN 444 MARLIN AND 35 REM.

We're opening up the performance and power of HammerDown™ to hunters who shoot 35 Rem. and 444 Marlin. Velocities are customized to produce superior ballistics and terminal performance through lever-action barrel lengths. The construction of the molecularly bonded soft point bullets has also been adjusted for the best accuracy and expansion at those velocities. The geometry of each round's case, bullet and cartridge ensures flawless cycling through tubular magazine and typical lever-action feeding systems.

TOP GUN WITH PAPER WAD 12 GAUGE

Experience the clay-crushing performance of one of our most trusted target loads and leave less plastic downrange. Select Federal Top Gun® offerings combine the new Paper Wad, cellulose-based filler and a paper gas-sealing over-powder wad to maximize patterns while reducing shooters' impact. Available in both lead and steel payload options.

FUSION 6.5 PRC

Fusion® was the first rifle ammunition specifically built for deer hunting—and it's still the best, offering the best expansion and weight retention in its class. It's an ideal match for the new 6.5 PRC cartridge, which has quickly caught hunters' attention thanks to its long-range accuracy, flat trajectory and manageable recoil. Paired with the Fusion bullet's molecularly fused jacket and pressure-formed core, the new load provides tag-filling penetration and stopping power.

UPLAND STEEL WITH PAPER WAD 12 GAUGE

Put more birds on the ground—and less plastic. Federal® Upland Steel uses the new Paper Wad, cellulose-based filler and a paper gas-sealing over-powder wad to produce effective patterns while significantly reducing the amount of plastic left in the field. Its high velocity makes the most of the 1-ounce steel payload.

HI-BRASS GAME LOAD 20 GAUGE

Woods or fields. Fur or feathers. Federal Hi-Brass Game Loads have you covered, and there's a new 20-gauge, 3-inch 1 ¼-ounce option available in 5 and 6 shot. The loads are carefully crafted and packed with features that provide reliable, effective performance on a variety of upland game.

PUNCH 44 S&W SPECIAL

Shooters who choose to protect themselves with the powerful 44 S&W Spl. can now opt for the versatility of Federal Punch™. Like all loads in the line, the 180-grain offering was developed using Federal Ammunition's decades of experience designing the world's finest defensive handgun loads. The bullet's skived jacket and soft lead core produce the best expansion and penetration for real-world defense, while its sealed primer delivers the reliable function and ignition you need.

CLEAN-22 REALTREE 22 LR

Concealment meets clean. CCI® Clean-22® Realtree® bottles hold 400 rounds, and their exclusive green, tan and black polymer bullet coating reduces copper and lead fouling in the barrel. The coating doesn't leave a residue and cuts lead buildup in suppressors 60 to 80 percent. The 40-grain round nose lead bullet's geometry has been optimized for accuracy and is ideal for both targets and small game.

GOLD DOT 30 SUPER CARRY

The power of 9mm Luger with more magazine capacity. The No. 1 bullet choice of law enforcement with the biggest handgun cartridge introduction in generations. It all comes together in all-new Gold Dot® 30 Super Carry. The cartridge uses a .312-inch diameter projectile to deliver as much muzzle energy as 9mm Luger, with terminal performance that far exceeds that of 380 Auto. The bonded Gold Dot bullet design gets even more from the cartridge, with higher weight retention, deeper penetration and more effective expansion.

BLAZER BRASS LEAD-FREE CLEAN-FIRE 9MM LUGER

Hit the range and leave without a trace. New Blazer® Brass Lead-Free Clean-Fire® provides consistent, accurate performance on targets without leaving any lead behind on the range itself or in the air. It uses the lead-free Clean-Fire primer and flat-nose, lead-free projectiles that are as safe and accurate as traditional FMJ bullets—through all guns and against all targets.

BLAZER BRASS 30 SUPER CARRY

Prepare yourself for any encounter with the handgun cartridge that's changing concealed carry forever. The 30 Super Carry cartridge provides the power of the 9mm Luger in a smaller package. Its .312-inch diameter projectile carries the same energy as 9mm Luger at the muzzle, with better ballistics than 380 Auto. Blazer Brass 30 Super Carry uses reliable FMJ bullets, reloadable brass, and quality primers and propellants.

HEVI-XII 12 GAUGE

Outperform steel in every category. HEVI-XII™ uses a payload of 12 g/cc density pellets to let hunters drop down three shot sizes from their typical steel payload and achieve the same downrange energy with the benefit of a tighter pattern and more lethal pellets on target.

HEVI-HAMMER UPLAND 12 & 20 GAUGE

With 15 percent of its payload made up of high-density bismuth (9.64 g/cc) layered over precision-steel pellets, HEVI-Hammer™ kills cleanly at a more affordable price. The bismuth packs nearly 50 percent more power than equivalent steel at 40 yards (6.67 ft-lb vs. 4.49 ft-lb for No. 2 shot). Available in 12 and 20 gauge.

HEVI-HAMMER DOVE 12 & 20 GAUGE

This load uses the same science as HEVI-Hammer Upland, with a layer of high-density bismuth (9.64 g/cc) stacked over precision-steel pellets. However, its No. 7 bismuth shot provides an even larger cone of lethality and higher pellet counts for fast, hard-to-hit doves. These 100 percent non-toxic payloads reduce the impact of high-volume shoots and are ideal for anywhere lead is prohibited.
